

Acclaim Data Fusion Server

Overview

Acclaim Data Fusion Server seamlessly fuses enterprise data from a variety of sources for the purpose of identity management.

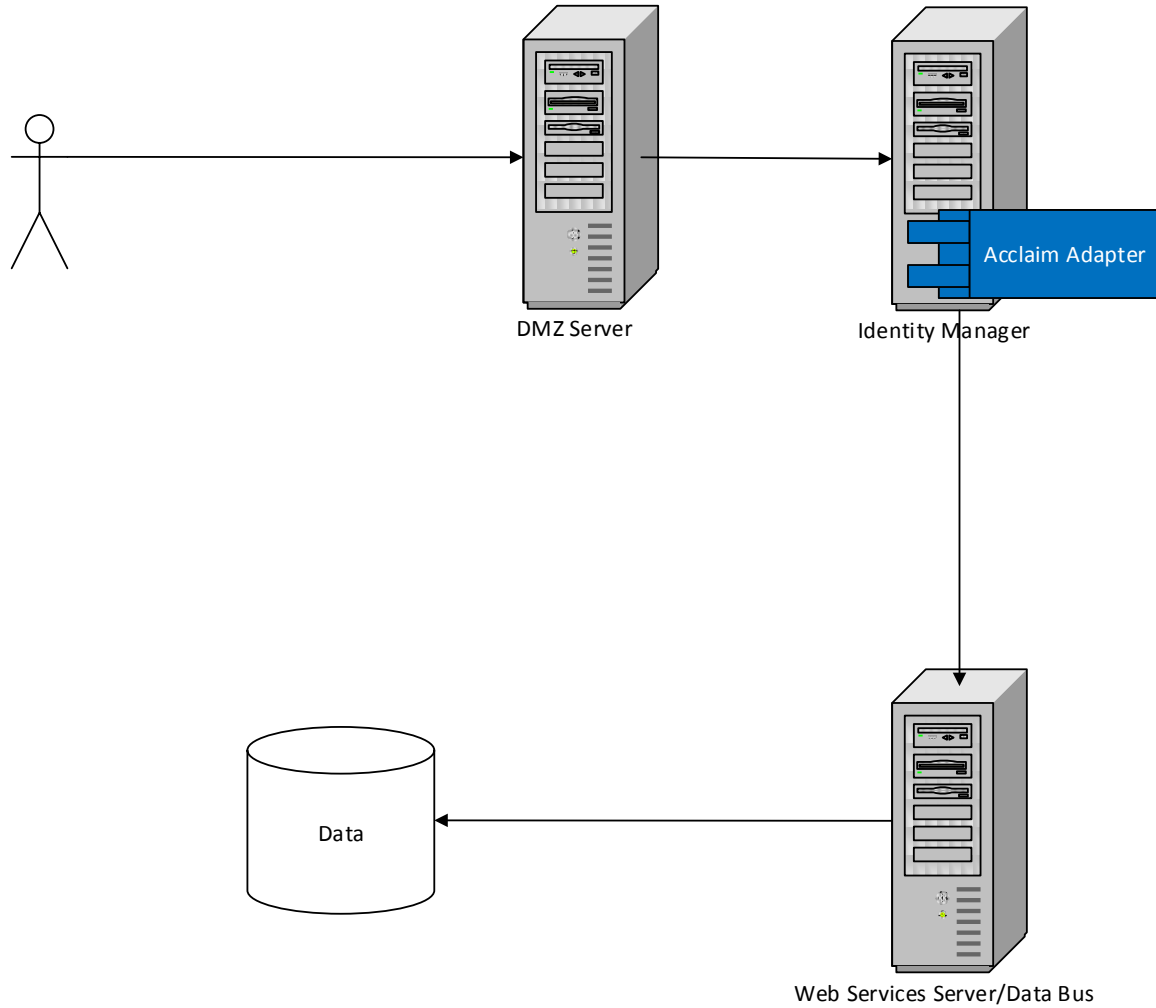

Advantages & Opportunities

The dynamic firm guarantees that user identity information does not exist in one place, even in the most well thought out data rationalization environment. Acclaim Data Fusion Server fuses identity information from multiple sources (data bases, web services, etc) and seamlessly makes it available to Identity Manager (or other such server) for management:

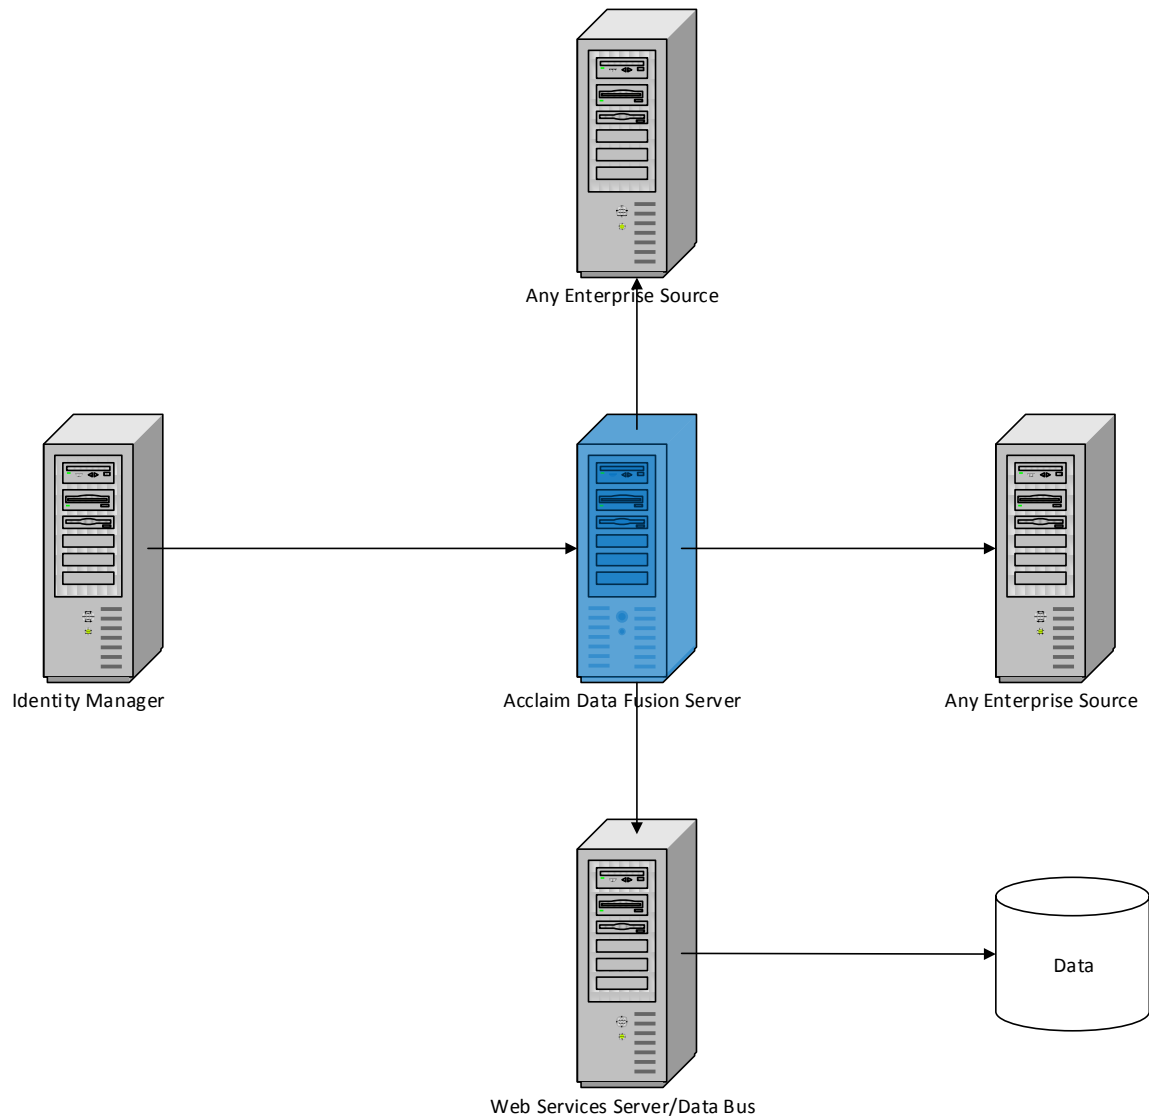

- Leverage existing investment in identity management software.
- Fast and Light Weight Architecture.
- May fuse unlimited number of heterogeneous data sources.
- Dynamic Data Mastering means agile enterprise.
