

Fact Sheet

Company Overview

Acclaim Consulting is a leading service, consulting and systems integration firm focused on Security, Identity, Governance and Access Management. Incubated by the MIT \$100K Entrepreneurship Competition in 2003, Acclaim Consulting provides solutions that enabled customers to increase security, efficiency, compliance and reduce cost. Our team provides strategy, solution deployment and custom solution development to Fortune 2500 clients in a wide range of industries on such initiatives as SSO, Federation, User Lifecycle Management, Access Governance, Cloud Security, API Security and Mobile Security.

Leveraging years of Security, Identity, Governance and Access Management experience, Acclaim Consulting has developed the experience and intellectual property to help customers embrace, consume and realize the wins available through the use of enterprise identity and access management solutions. Celebrating eleven years as professional technology solely focused on IAM services, Acclaim Consulting has offices in Boston and Atlanta.

Company Offerings

Consulting / Service Capabilities

Integrity, confidentiality and availability regarding IT assets and data are the objectives of any Security, Identity, Governance and Access Management program. Today, organizations face significant challenges in meeting these objectives as access to systems and data is needed by a greater number of users, on any device – internal and external and rules and regulations continue to change often in uncoordinated ways. Acclaim Consulting, a leader in Security, Identity, Governance and Access Management services, can help you address these key issues throughout the lifecycle of your security program.

We provide project management, technical architecture, platform and application technical expertise, custom solution development and experienced process design resources to successfully build, deploy and integrate Security, Identity, Governance and Access Management solutions into the client's environment.

Advisory Services

How does anyone keep up with the changes and convergence occurring in information security? Whether it's the IT analyst community or the security product vendors, everyone has their own language to define the challenges facing organizations today, including: enable and protect the open enterprise -- hybrid enterprise -- IdaaS -- on-premise v/s cloud security -- BYOD -- identity is the new security perimeter...

Acclaim Consulting specializes in Security, Identity, Governance and Access Management, and we help our clients sort through the hype and establish a real strategy and plan for adoption that best aligns with the business needs. Our experience has led to the following advisory services:

- IAM Strategy
- Cloud Security Assessment (CSA)
- Architectural Design Session (ADS)
- Existing Solution Health Check

Solution Architecture

We specialize not just in technology, but in the process of translating business requirements to technological solutions. Our guiding vision is to use technology to further business goals. Architecture definition involves translating IT strategy, goals and vision into practical e-business infrastructures.

Acclaim Security Suite

It's rare for the out-of-the-box solutions to meet 100% of client's identity management needs since each firm manages its Identities, Access and IT Controls in a unique way. Our security suite solutions are geared towards bridging this gap and are based on extensive experience customizing a variety of Identity, Access Management and Provisioning solutions.
